## Domain Availability Check

✔ Find out if a domain is available for registration.

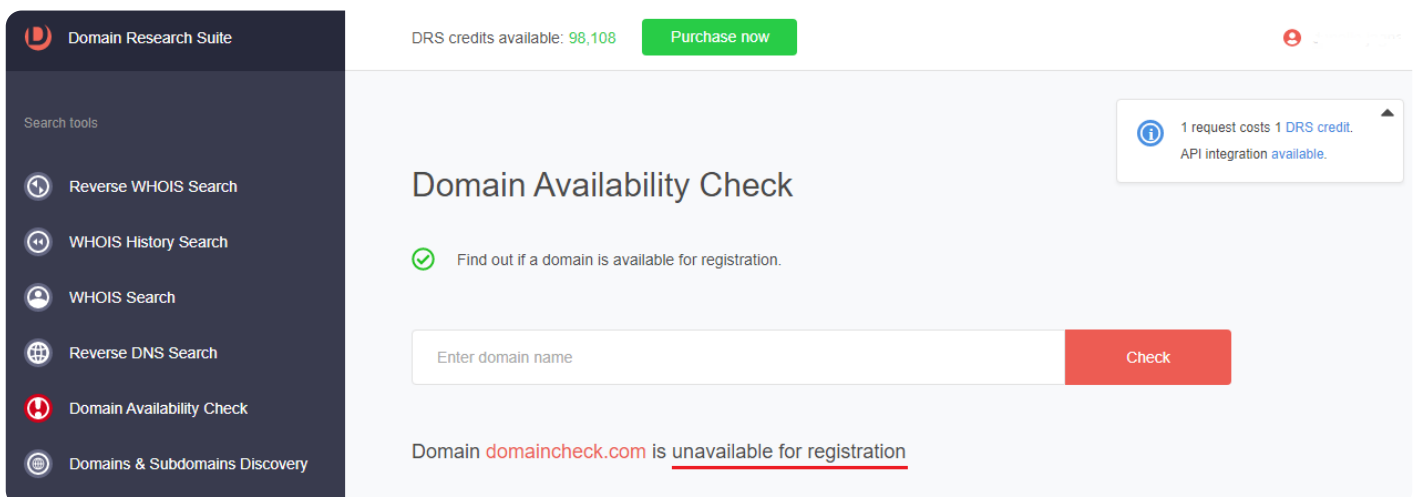

[Check](#)

**Domain Availability Check** allows you to verify the availability of a domain for registration. All you have to do is type the domain name into the search field and click **Check**.

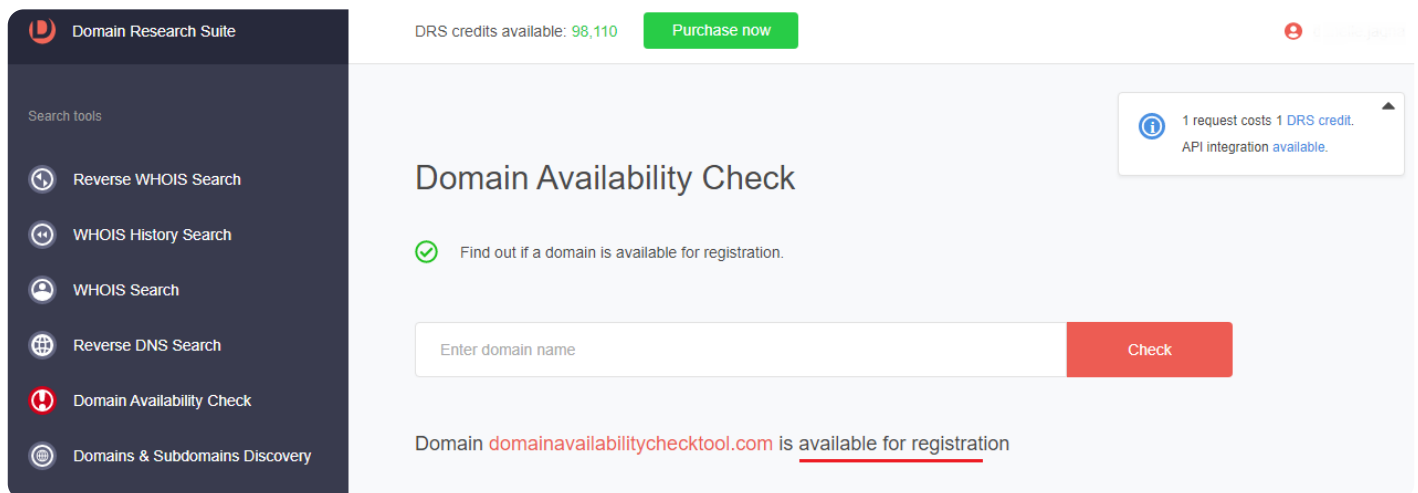

The screenshot shows the 'Domain Availability Check' tool interface. On the left is a dark sidebar with the 'Domain Research Suite' logo and a list of search tools: Reverse WHOIS Search, WHOIS History Search, WHOIS Search, Reverse DNS Search, Domain Availability Check (highlighted with a red icon), and Domains & Subdomains Discovery. The main area has a header with 'DRS credits available: 98,110' and a green 'Purchase now' button. Below this is the title 'Domain Availability Check' and a green checkmark icon with the text 'Find out if a domain is available for registration.' A search input field contains the text 'domainavailabilitychecktool.com'. To the right of the input field is a red 'Check' button, which is highlighted with a red rectangular box and a red arrow pointing to it from the input field. In the top right corner, there is a small information box stating '1 request costs 1 DRS credit. API integration available.'

If the domain is already registered, the tool will show a message saying, “**Domain [domain name] is unavailable for registration.**”

The screenshot shows the 'Domain Availability Check' tool interface after a search. The search input field now contains the placeholder text 'Enter domain name'. The red 'Check' button is still present. Below the input field, a message states: 'Domain **domaincheck.com** is unavailable for registration'. The sidebar and header elements are the same as in the previous screenshot.

On the other hand, if the domain is available for registration, the tool will display, “**Domain [domain name] is available for registration.**”

The screenshot shows the 'Domain Availability Check' tool interface. On the left is a dark sidebar with the 'Domain Research Suite' header and a list of search tools: Reverse WHOIS Search, WHOIS History Search, WHOIS Search, Reverse DNS Search, Domain Availability Check (highlighted with a red icon), and Domains & Subdomains Discovery. The main area has a light blue header with 'DRS credits available: 98,110' and a green 'Purchase now' button. A notification box in the top right states '1 request costs 1 DRS credit. API integration available.' The main content area is titled 'Domain Availability Check' and includes a green checkmark icon with the text 'Find out if a domain is available for registration.' Below this is a search input field with the placeholder 'Enter domain name' and a red 'Check' button. The result at the bottom states 'Domain domainavailabilitychecktool.com is available for registration'.

Any interested party can grab domains available for registration. Take note that available domains aren’t necessarily new. They may have had a long history before the previous owner left its registration to expire.
