- Registrant Monitor
- Brand Monitor

Domain Availability Check

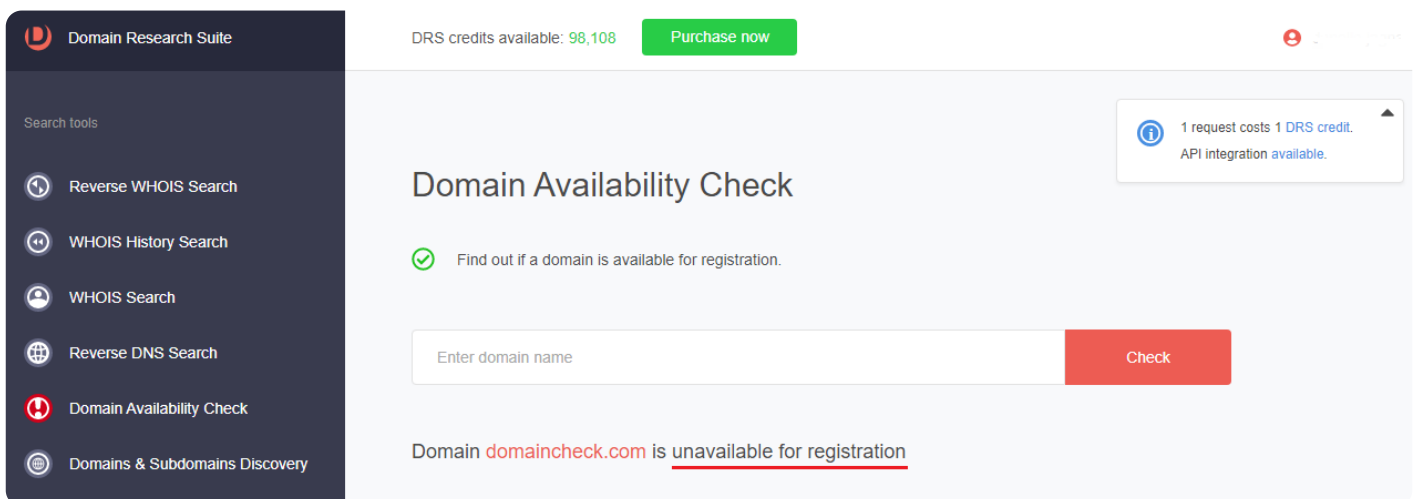

✓ Find out if a domain is available for registration.

Enter domain name [Check](#)

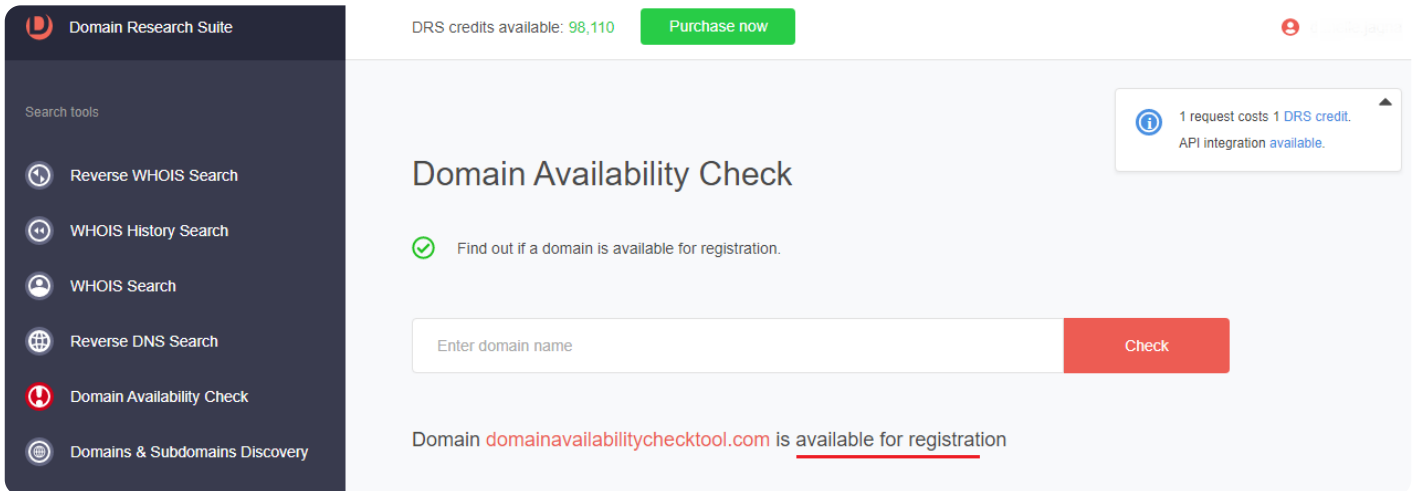

Domain Availability Check allows you to verify the availability of a domain for registration. All you have to do is type the domain name into the search field and click **Check**.

If the domain is already registered, the tool will show a message saying, “**Domain [domain name] is unavailable for registration.**”

On the other hand, if the domain is available for registration, the tool will display, “**Domain [domain name] is available for registration.**”

The screenshot shows the 'Domain Availability Check' tool interface. On the left is a dark sidebar with 'Domain Research Suite' and a list of search tools: Reverse WHOIS Search, WHOIS History Search, WHOIS Search, Reverse DNS Search, Domain Availability Check (highlighted), and Domains & Subdomains Discovery. The main area has a top bar with 'DRS credits available: 98,110' and a 'Purchase now' button. Below this is the 'Domain Availability Check' title and a green checkmark icon with the text 'Find out if a domain is available for registration.' A search input field contains the text 'Enter domain name' and a red 'Check' button. Below the input field, the result is displayed: 'Domain domainavailabilitychecktool.com is available for registration'. A top-right notification box states '1 request costs 1 DRS credit. API integration available.'

Any interested party can grab domains available for registration. Take note that available domains aren't necessarily new. They may have had a long history before the previous owner left its registration to expire.

Your turn to have fun with Domain Availability Check! You can access this tool and others [here](#).
